Escapes! To The Shores Hurricane Sally Update

Good Friday evening. The following are this week's update notes:

- BE-CI has completed the water testing and leak investigation as of Wednesday. Full reports are expected to be delivered to the Board next week.
- We are still pending a few devices on the fire system and the Fire Marshall has been in contact with JCI and will require being present when the final testing of the system occurs after repairs.
- Roof designs are underway and hope to be completed within the coming next couple of weeks.
- The wooden privacy fence has been restored on the east side of the property.
- Taylor Power generator contracts have been approved and the new generator will be ordered next week.
- Water heater replacement contracts are in the final approval stages and will begin during the rebuild of the building.
- Green Electric has been working on multiple building and parking structure electrical and lighting issues.

In addition to this week's notes, The Board President would like to remind everyone that there is one Board position up for election for the next annual meeting. Please also note the annual meeting is more than likely going to be held in a virtual format. More in formation will come once we near the date of the meeting in your annual meeting notices.

Have a safe and healthy weekend!

Sincerely,
Resort Management
